### **Letter of recommendation**

To whom it may concern,

I am pleased to write this letter of recommendation for Muhammad Aslam. I am a lecturer for special tasks for the subject area of instrumental analysis at Anhalt University of Applied Sciences. Mr. Aslam worked under my supervision during two projects. One being a literature study entitled “Yield, nutritional composition and aroma compounds of the pink oyster mushroom *Pleurotus djamor* as a function of cultivation conditions” (1<sup>st</sup> April to 30<sup>th</sup> September 2022, group work). The other project was conducted solely by himself and involved experiments in the laboratory (title: “Influence of sample preparation method on the caffeine extraction in coffee”, 1<sup>st</sup> October 2022 to 31<sup>st</sup> March 2023).

Mr. Aslam had a strong work ethic and was very friendly and courteous. He is able to research for scientific literature on his own and is capable of putting his findings into new context.

He diligently conducted the trials at the lab. During the practical project, Mr. Aslam acquired knowledge about HPLC analysis using reversed phase chromatography including external standard calibration and sample preparation techniques. He was working accurately and conducted all analysis conscientiously to ensure that he meets the requirements. His attitude was at all times very good.

I am certain he would be a valuable asset for any company and I wish him all the best for the future.

Sincerely,

Christin Fischer
